MENART

SPM RANGE

Self-Propelled Windrow Turner

Designed for optimum aeration and mixing process – with larger trapezoidal tunnel, powerful rotor drum, no compacting effect, left-right crossing flow – SPM turners can process huge windrows at a high speed.

SP RANGE

Tow-Behind Windrow Turner

SP turners process wider and higher windrows at a fast speed. Excellent mixing and aeration is ensured by its specific paddle orientation and large open tunnel. Easy and safe to be towed and moved around on any kind of terrain.

B-RANGE

Fast speed shredder

High-speed and swinging-hammer shredder that can shred green waste, pallets, construction wood, food scrap, biowaste, manure, etc. without excessive wear compared to chippers. Available as mobile or stationary, and powered either as diesel, electric, or PTO-tractor.

TSC RANGE

Compact Rotary Screen

Rotary screens equipped with a large integrated hopper, a drum with its own cleaning brush and a self-carrying structure. The TSC screens are available with diesel or electric engines. With optional wheels and can be towed on the site.

ADVANTAGES

- Tailor-made solutions
- Wide scope of services from engineering to local training
- Easy operation and maintenance
- Simplicity, robustness, and reliability

WHY CHOOSE US

Menart, a Belgium-based company, specialises in the design, manufacture, and construction of composting and waste treatment equipment for the preservation of the environment

As the exclusive distributor of Menart in Australasia, **MECBIO** can supply, install, and maintain state-of-the-art machineries as a facility or as standalone items.
